

Liver purity in GSE50760 metastases and its effect on Primary-vs-Metastasis GSEA

A

Liver signal across Normal -> Primary -> Metastasis

HSIAO_LIVER_SPECIFIC_GENES ssGSEA per sample; lines join each patient's three tissues.

B

Primary vs Metastasis NES: unadjusted vs purity-adjusted

NES with BH-FDR q per cell; * <0.05, ** <0.01, *** <0.001.

(A) HSIAO_LIVER_SPECIFIC_GENES ssGSEA score per sample; lines join each patient's three tissues – metastases carry heavy hepatic signal.
(B) Primary-vs-Metastasis GSEA NES before vs after adjusting the ranking for the liver score; FDR stars * <0.05, ** <0.01, *** <0.001 (BH).
