

A

Survival association of DTP-module scores across cohorts

Univariable continuous-score Cox PH, landmark 36 mo. Cells: per-SD HR, raw p, FDR q (BH); * FDR<0.05.

B

Kaplan-Meier survival by signature score (median High/Low split)

Median High/Low split; curves annotated with log-rank raw p and BH-FDR q. Continuous-Cox per-SD HR effect sizes are in the matrix panel. 3-yr landmark, x capped 36 mo.
