

DTP Up score vs survival across 25 TCGA cohorts

Univariable continuous-score Cox HR per 1 SD within each cohort (95% CI); x truncated to [0.1, 10].

Left: n/e + per-SD HR [CI]; right: raw p, FDR q (BH); * FDR<0.05; grey n/t = not testable. TCGA-COAD (CRC) highlighted.

● in range ● Score effect ● Higher hazard (HR>1) ● Lower hazard (HR<1)
