

UNIVARIABLE

Does the score relate to outcome?

Reports: hazard ratio per 1 SD,
concordance index.

ADJUSTED · CONFOUNDING

Does the score add information beyond clinicopathology?

Reports: change-in-estimate,
LRT vs covariate-only model,
concordance.

INTERACTION · EFFECT MODIFICATION

Does the score's effect differ between subgroups?

Reports: LRT of the product
term vs the additive model.

Both multivariable families are fitted only where there are at least 10 events per variable (EPV gate).
